Explanation of the key and light system

You will receive your room key at check in. We will be happy to program a duplicate key for you on request. The room key consists of a black batch and a dummy key.

Room key

The black batch acts as the actual room key. You open your room by placing it on the black contact field above the door handle. Once this flashes green, you can open the room door. Your batch also gives you access to the ski or bike cellar and to your personal ski locker, which is located there. It is also possible to open the main door with your batch if it is locked at a later time.

Light system

You can switch on the light in your room with the dummy key, which is attached to your room key. To do this, you must hang it on the main switch by the door. This is located directly next to the room door and is marked with a white key symbol.

The light in the various areas of your hotel room is switched on by tilting the switch upwards and switched off by tilting it downwards. The light can be dimmed or brightened by tilting the bathroom switch up or down and holding the switch pressed for several seconds. You can switch off the light in the entire room using the switches next to your bed.

Light switch

- Entrance: You can use the left-hand switch to switch the light in the entire bathroom on and off and the right-hand switch to switch the light in the living and sleeping areas on and off.
- Bathroom: You can use the left-hand switch to switch the light on the left-hand side of the bathroom on and off and the right-hand switch to switch the light on the right-hand side.
- Next to the bed: On the left side of the bed, you can switch off the bedside lamp with the upper right switch and the entire room with the lower one. You can control the light in the sleeping area with the top left switch. The floor lamp can be controlled with the lower left switch. The light switches on the right-hand side of the bed are mirror inverted.
